PROFILE

With over 10 years of experience in software development, I specialize in creating requirements-driven solutions with a keen eye for detail. I bring a deep understanding of software development design patterns and I am highly motivated to solve complex problems in the most efficient and impactful way possible, all while being a collaborative team player.

Throughout my career, I've focused on developing solutions for small to mid-sized enterprises. I've worked across various industries, automating and integrating business processes to help organizations operate more efficiently and achieve their goals with greater ease and effectiveness.

TECH STACK

Backend Technologies

- PHP, Laravel Framework
- Node, Typescript, Python
- PHPUnit, Jest

Frontend Technologies

- VueJs, React, jQuery, Typescript
- HTML, CSS, JavaScript, Bootstrap

Database Technologies

- MySQL, PostgreSQL, Snowflake

Design Patterns

- MVC
- REST API
- Domain Driven Design (DDD)
- Test Driven Development (TDD)
- Repository Design Pattern
- Service Layer Design Pattern

Project Integrations

- Docker
- GitHub Actions (CI/CD)
- Slack
- Microsoft Teams
- Algolia
- OpenAI

Project Management

- JIRA
- Click Up
- Azure DevOps
- Agile / Scrum

Cloud Infrastructure

- AWS, Azure, Linode

Solution Delivery

- ETL
- Terraform
- Query Optimizations
- Swagger Documentation
- GitHub

PERSONAL PROJECTS

Project: Sequelize Field Parser (npm package)

Link: <https://www.npmjs.com/package/@ealforque/sequelize-field-parser>

Purpose: To dynamically request and query only the data you need instead of querying the entire columns of a Sequelize ORM model.

Stack: Node · Typescript · Sequelize

Code Quality: 100% code coverage (Jest) · ESLint

Project: Axios HTTP Logger (npm package)

Link: <https://www.npmjs.com/package/@ealforque/axios-http-logger>

Purpose: To log http axios request on log file that can reviewed at any time.

Stack: Node · Typescript · Axios

Code Quality: 100% code coverage (Jest) · ESLint

Project: NexFile – AI Powered Delta-based Document Management System

Goal: To have a version controlled document management system using deltas integrated by AI

Backend: Express (Node) Typescript · MySQL · Docker · GitHub Actions CI/CD · OpenAI

Frontend: VueJs · Pania · Tailwind · Vue Router · Typescript

Code Quality: 100% code coverage (Jest) · ESLint

Pattern: MVC | DDD | TDD | SOLID | Repository Pattern

Project: UAuth – Authentication Service

Goal: To have a single authentication service for all served applications

Backend: Express (Node) Typescript · MySQL · Docker · GitHub Actions CI/CD

Frontend: VueJs · Pania · Tailwind · Vue Router · Vee Validate · Typescript

Infrastructure: AWS EC2 RDS Bastion · Terraform · GitHub

Integrations: GitHub to Slack CI/CD Notification · Resend Email Service

Code Quality: 100% code coverage (Jest) · ESLint

Security: JWT HttpOnly Cookie + Double Submit CSRF Cookie

Pattern: MVC | DDD | TDD | SOLID | Repository Pattern

Project: RESTful API - Boilerplate

Goal: To have a common feature rich boilerplate for easier and faster backend MVP development

Backend: Laravel | MySQL | Docker | GitHub Actions CI/CD

Features: Sanctum | Offset & Cursor Pagination | RESTful API Sort & Filter

Integrations: GitHub to Slack CI/CD Notification

Code Quality: 100% code coverage (PHPUnit) · PHP CS Fixer

Pattern: MVC | DDD | TDD | SOLID | Repository Pattern

EXPERIENCE

Full Stack Software Developer

GemLife

Helensvale, QLD, Australia

June 2025 – Present (*Full Time*)

Node Typescript | MySQL | REST API | Integrations | VueJs | Azure | GitHub | Azure DevOps

- Implemented the backend API as an API gateway proxy for all vendor integrations
- Implemented integration for IntelliHR to HR3 payroll onboarding sync
- Implemented integration for OnSite Companion to Plexa purchase orders and service providers
- Implemented data ETL ingestors for OnSite Companion, Plexa, Technology One and BrightFox
- Implemented unit tests resulting 100% codebase cobertura test coverage
- Implemented infrastructure on Azure ecosystem (DevOps, VMs, App Gateway, automated deployment and MySQL DB)

Software Developer

StrongRoom AI

Melbourne, VIC, Australia

January 2024 – April 2025 (*Full Time*)

Laravel | MySQL | REST API | Algolia | VueJs | Rust | Git

- Developed REST API endpoints for new features on the aged care software platform
- Implemented Tasmanian regulatory conformance updates to our aged care platform
- Implemented unit tests for existing code blocks
- Reviewing pull requests and conducting peer code reviews
- Resolved latent bugs and maintained the current codebase of the aged care platform
- Performed verification testing after each merge to ensure successful code builds across environments
- Collaborated with the customer success team to address software incident reports

Software Developer

My Green Butler / Wise Sustainability

Canberra, ACT, Australia

April 2023 – September 2023

PHP | Laravel | MySQL | REST API | BitBucket | Git

- Developed REST API endpoints for new features.
- Migrate MySQL to PostgreSQL
- Implement and/or modify database structure to new requirements of the API endpoints
- Implement domain driven design with repository and service layer patterns to achieve granular code blocks making the codebase robust and testable.
- Implemented new features on the existing site using design patterns. New features included content for guest web-app, modifying inputs, outputs, and structure of database, and implementing gamification mechanics.
- Fixing latent bugs.

Full Stack Software Developer

Zhik Pty Ltd.

St. Leonards, NSW, Australia

August 2022 – April 2023 (*Independent Contractor*)

April 2023 – December 2023 (*Full Time*)

PHP | Magento | MySQL | API Mesh | Swagger | Python

- Maintaining (specifically in fixing bugs) in the currently production running Magento instance
- Develop new functionality requests from internal stakeholders.
- Integrated third party modules to our Magento instance.
- Resolve service request JIRA tickets.
- Developed scheduled python-based Data ETL for Magento database of data which they will use on reporting.

Backend Software Developer

Blueberry Markets

North Sydney, NSW, Australia

April 2022 – August 2022 (*Full Time*)

Python | MySQL | Snowflake | REST API | GitHub

- Developed REST API to expose data from MySQL servers using SSH identity file (.pem) using Masonite python framework.
- Developed python-based Data ETL applications to integrated data into Snowflake database of the following:
 - Ingestion of Google Ads Performance via Google Ads API
 - Ingestion of AdRoll Performance via NextRoll API
 - Ingestion of Meta (Facebook) Ads Performance via Meta API
 - Salesforce data via Salesforce connection
 - MetaTrader data via MySQL connection and SSH identity file (.pem)
- Migration of frontend static pages to existing Yii2 framework and integration of dynamic data following the DTO, service layer, repository layer and dependency injection.

Backend Software Developer

TERP

Oslo, Norway

December 2020 – April 2022 (*Full Time*)

PHP | Laravel | Lumen | REST API | MySQL | Docker | TDD | DDD

- Develop the API for the new MVP project which involves integration of multiple databases.
- Implement and/or modify database structures that are required for the API endpoints.
- Test driven development approach used in developing the endpoints
- Implement domain driven design with repository and service layer patterns to achieve granular code blocks making the codebase robust and testable.
- Conducts code reviews to fellow developers to assure well-written and optimized codebase.
- Communicates directly to the system architect and project manager for evolving MVP requirements.

- Responsible in maintaining (*specifically in fixing bugs*) in the currently production-running codebase.
- Responsible on onboarding new hires to the code base (*specifically in setting up local development environments and introducing them to the code base structure*).
- Since we have a training or a bootcamp program, I am also responsible and successfully carried out a backend trainee from zero to handling JIRA tickets.
- Handles daily standup meetings.

Software Developer – Full Stack

Osiris Systems PH / Meridian SoftTech Solutions

Cebu, Philippines

January 2014 – December 2020 (*Full Time*)

PHP | Laravel | Lumen | MySQL | Blade | DDD | TDD

- Interfaces with the stakeholders to document software requirements
- Translates software requirements to a working codebase.
- Conducts milestone presentations to stakeholders.
- Responsible in the delivery and deployment of application to stakeholders
- Conducts UAT and training to end users.
- Drafts and create contracts for software development services.

Software Engineer

NCR Cebu Development Centre

Cebu, Philippines

April 2011 – September 2013 (*Full Time*)

C++ | Perl | JIRA | VSS

- Responsible in maintaining (specifically enhancements and bug fixing) to existing device installation, device configuration and device firmware update scripts.
- Develop device driver installation scripts.
- Participates in code reviews with Atlanta software engineers.
- Conducts device integration testing, functional testing and regression testing of SelfServ Checkout terminal devices
